

Public Access Wireless Network (PAWN) at Jervis Public Library

Use your own wireless-ready computer to access the Internet at the library.

CONNECTING TO PAWN

Users are responsible for knowing how to configure their own equipment. Library staff is not permitted to assist in configuring computers to connect to the Public Access Wireless Network (“PAWN”) beyond giving users these guidelines and providing the current WEP encryption key. To access PAWN, a computer must have an 802.11b or 802.11g Network Interface Card (NIC). The following network settings are required to access PAWN:

Network Name/Service Set ID (SSID):	JervisLib
Internet Protocol (IP) Address:	(IP addresses assigned dynamically by DHCP.)
Domain Name Server (DNS) Settings:	(DNS is assigned automatically by DHCP.)
Wired Equivalent Privacy (WEP) Key:	<i>Ask at Information Desk for encryption key number.</i>

The SSID and WEP key are case sensitive—upper and lower case letters must be typed as shown. Users who change their network settings to access PAWN may need to change settings again to access other wireless networks.

A wireless network connection is inherently less secure than a wired connection due to the broadcast transmission of network data. Jervis Library uses WEP to encrypt wireless transmission between a user’s computer and the library’s wireless network equipment. However, this does not constitute a guarantee of security or privacy for users of PAWN. **Users are responsible for maintaining the security of their computers**, and are urged to use virus protection, personal firewalls and other measures to protect information on their laptop. **USE AT YOUR OWN RISK.**

Access to printing services is NOT AVAILABLE through PAWN. Customers may, email files to themselves or save files to a floppy disk, Zip disk, or USB flash drive and print them using our public Internet Macintoshes, *provided that files have been saved in a format compatible with library software.* Plug-in USB floppy and Zip drives are available to borrow at the Information Desk.

Hotspots: Currently, the library is striving to provide wireless signal in the Dillon periodical room, in the table area near the elevator, and in the main reading room. If a user is experiencing weak signal strength, moving closer to either the Information Desk or Circulation Desk should help.

WIRELESS ACCESS RULES OF USE

By using the Jervis Public Access Wireless Network you agree to abide by the library’s Internet Access Policy (see reverse), Rules of Behavior, and applicable General Rules for computer use. *Particularly:*

The Library Is A Public Setting—Users Should Conduct Themselves Accordingly.

- Internet sites and user-created content displayed on screen are to be acceptable for general public consumption.
- The library cannot guarantee privacy for those using computers in the library.
- Library patrons and computer users are to respect the rights and privacy of other patrons and users.

Disruptive Behavior Will Not Be Tolerated.

- The library reserves the right to preserve an atmosphere conducive to study in the library.
- Examples of disruptive behavior while using computers: Talking, moving about, crowding around computers, rude or abusive language, harassment.

Please Use Headphones To Listen To Sound.

No Food, Drink Or Cell Phone Use Allowed In The Library.
